Berechnungsgrundlagen Sparzinsen

Als Grundlage dienen die Daten der Schweizerischen Nationalbank SNB.

Es werden jeweils die durchschnittlichen (geometrischen) Jahreswerte der Sparzinsen verwendet.

Die Teuerung ergibt sich als die prozentuale Veränderung der Dezemberwerte.

Zur Berechnung des Realzinses wird die exakte Methode angewendet.

Berechnungsgrundlagen Schweizer Aktien

Als Grundlage dient der Pictet-Aktienindex. Dieser beruht auf Daten von Rätzer, Huber und Pictet sowie ab 1992 auf dem SPI-Index inklusive Dividenden.
